DESCRIPTION

MCScap is a textile cap marked according to the international 10-10 system. The cap is designed for use with MCScap-C/TC/T/NT/NTC/NTH/StTC/StNT electrodes. Textile cap is made of elastic material, preserving the shape and size. The cap provides the exact position of the electrodes on the head without additional measurements and adjustments. Large holes are provided for ventilation and access to the electrodes and patient's skin. The cap is fixed on the head with the chin or chest belt. Size identification is carried out by the color of the material.

* Recommendations are based on WHO anthropological data <http://www.who.int/childgrowth> and ISO/TR 7250-2:2010. This information is a reference. In each case, the size of the cap should be selected, guided by the measured value of the circumference of the patient's head.

Before examination, measure the patient's head circumference and select a cap of the appropriate size. Choosing the correct cap size is important for correct EEG recording and patient comfort.
